Announced Audit

AUDIT EXECUTIVE SUMMARY:

Processing facility located in the Terminal Market. This facility is located in a building with produce companies located on either side. Products arrive and are processed in several different ways. There are 22 hazard analyses available for the different products and processes. Product is received and can be peeled, diced, chopped, shredded, washed with single pass water or in batch water, spun dry, mixed or blended together, packaged, metal detected, labeled, boxed, and shipped. There are two CCPs: Metal Detection and PAA levels in the wash water. An ice machine is also available for use when needed for cooling. Hand and machine chopping, dicing and shredding occurs. When using water, a large vat of water with PAA levels of 60-100ppm is made and the water is taken from the vat and transferred to the area of application.
